# Variable Speed Drive - AC15 Series

## Overview

### Description

The AC15 Compact Drive is a simple to use, reliable and economical solution for every-day motor control applications that require speed or torque control in the power range of 0.37 kW to 30 kW. With compact dimensions and features normally only associated with higher specification drives, including Safe Torque Off, Ethernet communications, sensorless vector mode for control of both Permanent Magnet (PMA) and AC induction motors and a full 150 % overload for 1 minute, AC15 provides an optimized solution for OEM machine builders looking for a compact, cost-effective drive without compromising on performance.

### Simplicity

AC15 is designed to reduce the time and effort required to install, setup and commission through its easy to use integrated keypad and application macros, or the powerful DSE Lite tool and rich function block set. Minimal wiring requirements and easily accessed terminals make AC15 quick and easy to install. Auto-tuning sensorless vector mode takes AC15 beyond simple V/Hz control allowing users requiring greater dynamic speed or torque control for their application to benefit from the drive's enhanced speed and torque accuracy.

### Reliability

Proven technology and manufacturing techniques ensure AC15 has been engineered and built to deliver consistently outstanding levels of performance day in, day out, ensuring maximum uptime and productivity. Thanks to its conformally coated PCBs, AC15 is capable of withstanding class C3 environments, allowing you to operate AC15 with the utmost confidence in more applications.

## Technical Characteristics - Overview

<b>Power Supply</b>	220 ... 240 VAC ±10 % Single Phase 220 ... 240 VAC ±10 % Three Phase 380 ... 480 VAC ±10 % Three Phase
<b>Input Frequency</b>	50/60 Hz ±10 %
<b>Power Range</b>	0.37...30 kW Heavy Duty (HD)
<b>Overload</b>	150% for 60 sec.
<b>Output Frequency</b>	0.5 - 590 Hz
<b>Safe Torque Off (STO)</b>	SIL2, PLd
<b>Operating Temperature</b>	0...40 °C (derate up to max 45°C)*
<b>Altitude</b>	0-1000m (derate up to 2000m)

\* Temperature derate not available on 0.37kW 230V version

## Features

### AC15 Series Drive

#### µSD Card Slot

For application cloning and firmware updates in the field

#### Built-in Display Keypad

Operate the drive and see real time diagnostic feedback through the backlit built-in display

#### Built-in Ethernet Comms

Modbus TCP/IP as standard. Access the drive webpage or program the drive through the popular and intuitive DSELite configuration tool

#### Built-in Safe Torque Off

Independently certified STO to SIL2, PLd as standard. Complies to:  
- EN ISO13849-1:2015  
- EN 61800-5-2:2017  
- EN 61508

#### 6901 Keypad Support

Connect an optional remote 6901 keypad to the RJ11 port

#### Built-in Motor Thermistor Input

PTC Motor Thermistor feedback connection as standard

#### User I/O

Exceptional quantity of configurable analogue and digital I/O for maximum application flexibility

### Standards & Compliance

The product is certified to the latest international standards:

Europe:

- Low Voltage Directive 2014/30/EU
- Electro-Magnetic Compatibility Directive 2006/42/EC
- EN61800-5-1:2017+A11:2021
- EN61800-3:2018
- IE 2 Compliant

North America & Canada:

- UL61800-5-1
- CSA22.2#274-17

## Applications

AC15 provides a no-fuss approach to general purpose industrial motor control applications across a wide range of industries, giving users the benefits of the inherent energy-saving properties of using a variable speed drive, as well as the improved reliability and extended service life benefits associated with smoother starting and stopping of regularly cycling loads.

### Typical applications for AC15 include...

- **Conveyor**
- **Centrifuge**
- **Fans**
- **Mixers**
- **Packaging Machines**
- **Textile Machines**
- **Strapping Machines**
- **Labelling Machines**
- **Industrial Washing Machines**
- **Machine Tool Spindles**
- **Roller Doors**

Conveyors

Centrifuges

Fans

Mixers

Packaging Machines

Textile Machines

## Software

### Parker Drive System Explorer (DSE Lite)

Parker drive configuration software Drive System Explorer (DSE) Lite is an easy to use drive configuration software package, designed to make programming your application as simple as possible without compromising on functionality.

DSE Lite is based around straightforward block programming and an intuitive user interface which supports user-defined configurations and offers real-time monitoring and charting. DSE Lite allows the user to create, parameterize and configure user defined applications as well as parameterize and connect fixed Motor Control blocks with up to 100 'links'

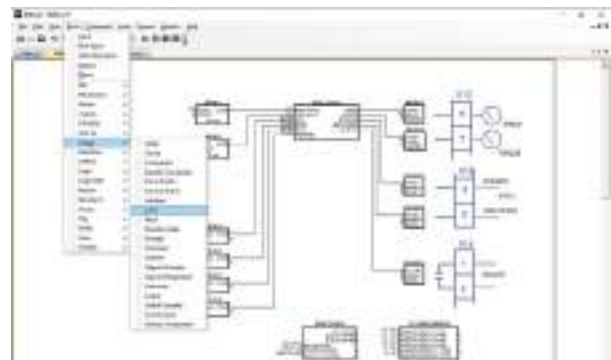

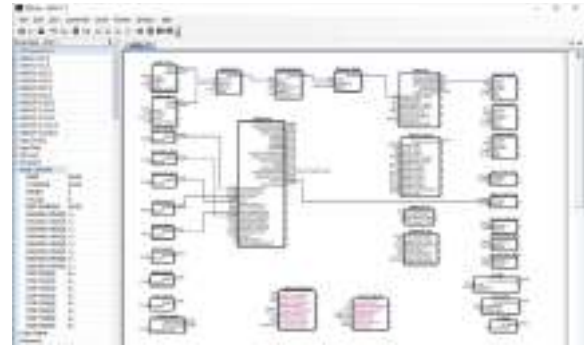

Thanks to the on-line help and pre-configured macro templates, users can achieve the optimum drive configuration without the need to navigate through complicated parameter menus.

DSE Lite for AC15 uses a standard Ethernet connection between PC and inverter, so no special lead is required.

Enhanced features of the AC15 include:

- High speed Ethernet connectivity
- Network scan feature
- Drive network identification
- Firmware installs over Ethernet
- Save a project to on-board Flash memory
- Compatibility with the AC30 Series PDD scope feature.

It is available free of charge to download from [www.parker.com](http://www.parker.com).

## Accessories and Options

### 6901 Remote Mounting Keypad

The popular 6901 remote mounting keypad can be mounted away from the drive, such as on the door of an electrical enclosure. This interface allows users to configure, operate and monitor the drive without having to access the drive directly. The remote keypad provides an alternative to the drive mounted keypad, offering a clear English language display and greater functionality. The remote mounting kit provides mounting bezel and a 1.5 m cable that is plugged into the RJ11 port on the drive.

### Cable Screening Bracket

Cable Screening Brackets are available for the AC15. These brackets offer a means of grounding the power cable screen connections, as well as supporting the power cables when connected to the drive.

## Braking Resistor

During deceleration, or with an over-hauling load, the motor acts as a generator. Energy flows back from the motor into the DC link capacitors within the drive, causing their voltage to rise. If this voltage exceeds a maximum value, the drive will trip to protect the capacitors and internal power devices. The amount of energy that can be absorbed by the capacitors can vary between different applications causing the drive to trip on overvolts. To utilize the drive's onboard dynamic braking capability, high power resistor(s), connected across the DC link, allow the dissipation of this excess energy for fast stops or load braking.

### Brake resistor selection

Brake resistor assemblies must be rated to absorb both peak braking power during deceleration and the average power over the complete cycle.

$$\text{Peak braking power} = \frac{0.0055J \times (n_1^2 - n_2^2) \text{ (W)}}{t_b}$$

$$\text{Average braking power } P_{av} = \frac{P_{pk} \times t_b}{t_c}$$

## EMC Filter

AC15 are supplied as standard with an EMC filter fitted that meets the requirements of a class C3 environment. For class C2 or C1 environments, an additional external filter may be required. An internal wire link may be easily removed to disconnect the Y capacitors for those installations where earth currents are undesirable.
